PRE-CONSTRUCTION, CLEARING, AND DEMOLITION NOTES:

1. All base size measures (e.g., protection, sediment control, health, construction equipment, etc.) must be in place, functional, and approved in an initial inspection prior to commencement of construction activities.

2. Stormwater Barriers approved for use include: sediment fences, erosion control blankets, or other suitable material, or/and cover, or other erosion control materials.

3. Stormwater Barriers approved are, but not limited to, trees, wetlands, and riparian protection areas, which are to be clearly marked with orange construction fencing or wire. Tree fencing is to be placed in a manner that allows for the normal growth of the trees. Activities are permitted to occur beyond the construction barrier.

4. Construction entrances shall be installed at the beginning of construction and maintained for the duration of the project. Additional measures including, but not limited to, traffic control, and signage, may be required to ensure that all fenced areas are kept clean for the duration of the project.

5. Run-on and run-off control measures shall be in place and functioning prior to beginning substantial construction activities. Run-on and run-off control measures include: slope drainage, outlet protection, check dams, surface landscaping, and drain stabilization.

These erosion and sediment control plans assume "top weather" construction. "Not weathered" construction measures need to be applied between October 1st and May 31st.

* NOTE: Pre-developed run-on sheet flows exist and are directed to on-site drainage and not directly into adjacent properties.
